

Science Curriculum

Italics are suggested ideas to help meet the Learning Intention

Bold are statutory requirements

SMCS

Year 1	1 -	ruit, bark, branches, trunk, stem, leaves, leaf, seed, flower, p	petal, roots, bulb, growth, water, sunlight,
Key Theme: Plants	wild, environment	t, local, plant	
Previous Learnin	ng (EYFS)	Core Learning Intentions	Extension Opportunities
To be reinfo	orced	Age Related	Next steps
Children know about simila	arities and	Identify and name a variety of common wild and garden	Become familiar with common names of
differences in relation to p	laces, objects,	plants, including deciduous and evergreen trees	flowers, examples of deciduous and
materials and living things.	•	name some common plants	evergreen trees, and plant structures
- Seasonal nature wa	alks	 name some plants that live in the garden 	(including leaves, flowers (blossom), petals,
		• name some plants that live in the wild - use the field	fruit, roots, bulb, seed, trunk, branches,
		what can you see? Buttercups, daisies, weeds, what can	stem).
		you see growing around the perimeter of the field?	compare and contrast different plants
		(bushes, tress some of the bushes contain berries such	sequence pictures of how plants changes
		as the holly bush and the elder trees, which the birds have	over time
		eaten and then excreted and caused further trees to	describe how deciduous trees changes
		grow)	throughout the year
		• name some trees in the local environment. <i>In our</i>	explain why some plants are only seen at
		grounds we have: oaks, hawthorn, ash, silver birch,	certain times of the year
		Laurel, hazel, Horse chestnut. Children could have a key to	
		try and find these trees – working as a class like a	
		scavenger hunt.	
		recognise that different plants live in the local	
		environment	
		• use simple identification guides to name plants in the	
		local environment	

They make observations of animals and	Identify and describe the basic structure of a variety of	
plants and explain why some things occur,	common flowering plants, including trees.	
and talk about changes.	Make sketches of the trees in the school grounds, label	
	with scientific language (word banks) e.g. roots, trunk,	
	leaves, branches, stem, blossom, fruit, bulb)	
	know that plants produce seeds: learn that 'if it has	
	seeds, it's a fruit'. Children to sort a range of fruits	
	and vegetables but cutting them in half e.g.	
	cucumber, tomato, apple, pear, pepper etc.	
They talk about the features of their own	Use the local environment throughout the year to	Observe the growth of flowers and
immediate environment and how	explore and answer questions about plants growing in	vegetables that they have planted.
environments might vary from one another.	their habitat (walk the perimeter of the field including	
	forest school: holly bushes (changes in leaves from the	
	bottom of the plant to the top), black ash, oaks,	

Working Scientifically: observing closely, perhaps using magnifying glasses, and comparing and contrasting familiar plants; describing how they were able to identify and group them, and drawing diagrams showing the parts of different plants including trees. Pupils might keep records of how plants have changed over time, for example the leaves falling off trees and buds opening; and compare and contrast what they have found out about different plants. Plant, grow and observe runner beans and broad beans - paper made house with a plastic bag attached with the bean inside it. The children then fill in a diary to describe ours progress.

Year 1	Key Vocabulary: human, animal, plant, meat, reptile, amphibian, fish, bird, mammal, herbivore, carnivore, omnivore. Senses: sight, sound, touch, smell, taste	
Key Theme: Animals including humans		
Previous Learning (EYFS)	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Children know about similarities and differences	Identify and name a variety of common animals	Describe differences between the different
in relation to places, objects, materials and living	including fish, amphibians, reptiles, birds and	animal groups (e.g. birds have feathers but
things.	mammals	mammals have fur)
- Animal habitats	Pupils should become familiar with the common	Identify animals which are more likely to be
 Animal patterns and prints 	names of some fish, amphibians, reptiles, birds and	seen in different seasons
- Seasonal nature walks	mammals, including those that are kept as pets.	

Self care / hygieneSports day: bodies	*Visit from a pet.	Explain why some animals are only seen at night
They make observations of animals and plants and explain why some things occur, and talk about changes. - Animal patterns and prints - Seasonal nature walks - Woodland animals - Life cycles - Minibeasts	Identify and name a variety of common animals that are carnivores, herbivores and omnivores Minibeast hunt in the school grounds identify the food of some common animals	group animals that belong to: carnivores, herbivores and omnivores Pupils should use the local environment throughout the year to explore and answer questions about animals in their habitat. (see fox trails around the perimeter of the field, badger sets on the edge of forest school). They should understand how to take care of animals taken from their local environment and the need to return them safely after study. *
	Describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets)	
	Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense. *senses afternoon (linked to mindful tasting) •compare differences in texture, sounds and smells •name and locate the basic parts of the human body •draw and label a simple body outline	

Working Scientifically: Pupils might work scientifically by: using their observations to compare and contrast animals at first hand or through videos and photographs, describing how they identify and group them; grouping animals according to what they eat; and using their senses to compare different textures, sounds and smells.

Year 1 Key Theme: everyday materials	Key Vocabulary: hard/soft; stretchy/stiff; shiny/dull; rough/smooth; bendy/not bendy; waterproof/not waterproof; absorbent/not absorbent; opaque/transparent.		
Previous Learning To be reinforced	Core Learning Intentions Age Related	Extension Opportunities Next steps	
Children know about similarities and differences in relation to places, objects, materials and living things. They talk about the features of their own immediate environment and how environments might vary from one another. They make observations of animals and plants and explain why some things occur, and talk about changes.	Distinguish between an object and the material from which it is made Pupils should explore, name, discuss and raise and answer questions about everyday materials so that they become familiar with the names of materials and properties such as: hard/soft; stretchy/stiff; shiny/dull; rough/smooth; bendy/not bendy; waterproof/not waterproof; absorbent/not absorbent; opaque/transparent. •Identify some naturally occurring materials: wood, rock, water •Identify some man-made materials: glass, metal, plastic		
Looks closely at similarities, differences, patterns and change. Adults will have: helped children to notice and discuss patterns around them, e.g. rubbings from grates, covers, or bricks.	Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock •identify some properties of materials (e.g. see through, waterproof, absorbent)	Pupils should explore and experiment with a wide variety of materials, not only those listed in the programme of study, but including for example: brick, paper, fabrics, elastic, foil. Name materials which have lots of different uses (e.g. paper- wrapping paper, tissue paper, writing paper, birthday card) Names objects that are sometimes made from different materials (e.g.: spoonsplastic, wooden, metal)	

Science Curriculum

Describe the simple physical properties of a variety of everyday materials	
Compare and group together a variety of everyday materials on the basis of their simple physical properties (both visible and non-visible)	make predictions about which materials will float and sink Describe objects that are made from lots of different materials Explain why people started using plastic bags rather than paper bags

Working Scientifically: performing simple tests to explore questions, for example: 'What is the best material for an umbrella? ... for lining a dog basket? ... for curtains? ... for a bookshelf? ... for a gymnast's leotard?'

Year 1 Key Theme: Seasonal Changes THIS WILL BE TAUGHT OVER TWO SESSIONS ONCE EACH TERM.	Key Vocabulary: Seasons: autumn, winter, spring, summer; day, night, day length Weather: rain gauge, temperature, weather vane, rainfall Investigating: observe, measure, record, changes	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Looks closely at similarities, differences, patterns and change.	Observe changes across the 4 seasons Pupils should observe and talk about changes in the weather and the seasons Use descriptive words, photos and pictures to record changes: children to stand in front of the tree by the forest school sheds. Take a photo in autumn, winter, spring and summer: make comparisons. •identify what to observe •collect evidence of changes (e.g. leaves, seeds, flowers)	Explain why animals are easier to spot at different times of year (e.g. migrating birds, hibernating animals)
Children know about similarities and differences in	Observe and describe weather associated with the	Use secondary data to describe weather in
relation to places, objects, materials and living	seasons and how day length varies	another setting

things. They talk about the features of their own	Pupils should be warned that it is not safe to look		
immediate environment and how environments	directly at the sun, even when wearing dark glasses.		
might vary from one another. They make			
observations of animals and plants and explain			
why some things occur, and talk about changes.			
Walling Colorification and in table and department the control of the disclored substitution of the control of the condition of the control of the con			

Working Scientifically: making tables and charts about the weather; and making displays of what happens in the world around them, including day length, as the seasons change.

Year 2	Key Vocabulary:	
Key Theme: Plants	Roots, stem, seed, bulb, leaf, flower, grain, fruit, germinate, life cycle, life process, healthy Investigate: compare, observe, predict, diagram, measure,	
Red onions (bulbs) Sunflowers (seeds)	investigate. compare, observe, predict, diagram, mea	isuie,
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps

garden plants, including deciduous and evergreen	into mature plants	Compare the plant cycle for a plant from a
trees	Explore how plants from seeds and bulbs grow	seed with that from a bulb
	Describe what happens to bulbs during the plant	
	cycle as they grow	Know that a seed and bulb both contain
	Describe what happens to a seed as it grows and	everything a plant needs to grow
	develops	
	Describe what they observe as new plants grow	
Identify and describe the basic structure of a	Find out and describe how plants need water, light	Explain that seeds and bulbs do not need
variety of common flowering plants, including	and a suitable temperature to grow and stay	light to germinate and identify how this is
trees.	healthy	different to the needs of a plant
	Note: Seeds and bulbs need water to grow but most	
	do not need light; seeds and bulbs have a store of	
	food inside them	
	Suggest how to find out about what plants need in	
	order to grow well	

	Recognise that plants are living and need water, light and warmth to grow Describe differences between plants grown in the light and in the dark	
	Pupils should be introduced to the requirements of plants for germination, growth and survival, as well as to the processes of reproduction and growth in plants.	Explain how plants in the desert survive with little water and plants in the rainforest survive with little light
Use the local environment throughout the year to explore and answer questions about plants growing in their habitat	Pupils should use the local environment throughout the year to observe how different plants grow. Walk the perimeter of the school field, what do you notice about the growth of the grass? Is it all the same colour (no, it has grown in zones) Why are no plants or grass growing under that tree / bush? (limited light). Observe buds growing on the trees during the winter months of January, February e.g. horsechestnut: red buds, Ash: black buds, Oak: fingers of buds, beech: as well as during the spring and summer months. Simialar to Y1, children could stand at the same spot e.g. around a tree and an area of growth and compare throughout the 4 seasons.	Use evidence and record how different plants grow. Use scientific language to compare places or seasons.

Working Scientifically: observe and record, with some accuracy, the growth of a variety of plants as they change over time from a seed or bulb, or observe similar plants at different stages of growth; setting up a comparative test to show that plants need light and water to stay healthy.

Seed: sunflower bulb: Red onions as these can be planted in May time

Year 2 Key Theme: Animals including humans (Large unit so taught across two half terms)	Key Vocabulary: mammals, birds, amphibians, reptiles, fish, gills, hatchling, chick, Offspring, Pregnancy, baby, toddler, child, teenager, adult, elderly, Egg, spawn, tadpole; caterpillar, pupa, butterfly; lamb, sheep Hygiene, lungs, exercise Survival: water, food, air

Distinguish between an object and the material	Identify and compare the suitability of a variety of	
from which it is made	everyday materials, including wood, metal, plastic,	Explain why plastics cause problems in the
	glass, brick, rock, paper and cardboard for	oceans
	particular uses	Explain the importance of reusing and
	Pupils should identify and discuss the uses of	recycling plastic
	different everyday materials so that they become	
	familiar with how some materials are used for more	
	than one thing (metal can be used for coins, cans,	
	cars and table legs; wood can be used for matches,	
	floors, and telegraph poles) or different materials	
	are used for the same thing (spoons can be made	
	from plastic, wood, metal, but not normally from	
	glass).	

Science Curriculum

Identify and name a variety of everyday materials,	Find out how the shapes of solid objects made from	Explain why some materials change shape
including wood, plastic, glass, metal, water, and	some materials can be changed by squashing,	when a force acts (i.e. push, pull, twist,
rock	bending, twisting and stretching	stretch) as a result of their properties
	Describe changes in shapes as a result of the action	Explain why one material may be more
	of pushes, pulls and twists	suitable for a purpose than another by
	They should think about the properties of materials	discussing properties
	that make them suitable or unsuitable for particular	Describe how swimsuits have changed over
	purposes and they should be encouraged to think	time and how the fabric is now more
	about unusual and creative uses for everyday	suitable
	materials.	Pupils might find out about people who
		have developed useful new materials, for
		example John Dunlop, Charles Macintosh or
		John McAdam.

Working Scientifically: comparing the uses of everyday materials in and around the school with materials found in other places (at home, the journey to school, on visits, and in stories, rhymes and songs); observing closely, identifying and classifying the uses of different materials, and recording their observations.

Year 2 Key Theme: Living Things and their habitats (Large unit so taught across two half terms)	Key Vocabulary: Life process, living, non-living, dead, never alive, movement, respiration, sensitivity, growth, reproduction, excretion, nutrition, habitat, conditions, survive, urban, woodland, pond, coast, coastal, minibeast, microhabitat, enquiry, survey, adaptation	
Previous Learning	Core Learning Intentions Extension Opportunities	
To be reinforced	Age Related	Next steps
From EYFS:	Explore and compare the differences between	To give scientific explanations as to why
Children know about similarities and differences in	things that are living, dead, and things that have	things are living, dead or never alive.
relation to places, objects, materials and living	never been alive	To compare characteristics between living,
things. They talk about the features of their own	Pupils should be introduced to the idea that all living	non-living and deas things.
immediate environment and how environments	things have certain characteristics that are essential	To apply these ideas to real life.
might vary from one another. They make	for keeping them alive and healthy.	
observations of animals and plants and explain		
why some things occur, and talk about changes.		

Explain differences between living and non-living	
things in terms of characteristics such as movement	
and growth	
They should raise and answer questions that help	
·	
them to become familiar with the life processes that	
are common to all living things.	
Identify that most living things live in habitats to	Pupils should compare animals in familiar
which they are suited and describe how different	habitats with animals found in less familiar
habitats provide for the basic needs of different	habitats, for example, on the seashore, in
kinds of animals and plants, and how they depend	woodland, in the ocean, in the rainforest.
on each other	
Pupils should be introduced to the terms 'habitat' (a	
natural environment or home of a variety of plants	
and animals) and 'microhabitat' (a very small	
habitat, for example for woodlice under stones, logs	
or leaf litter).	
Identify and name a variety of plants and animals in	Compare animals found in familiar habitats
their habitats, including microhabitats.	with unfamiliar habitats
They should raise and answer questions about the	compare plants found in familiar habitats
local environment that help them to identify and	with unfamiliar habitats
study a variety of plants and animals within their	Use different factors to compare a range of
habitat	habitats (e.g. water, light, temperature)
- With help, <u>use keys</u> to identify some animals	
and plants	
- Recognise that different plants live in the	
local environment E.G. walk around the	
school site. Ask what grows at the bottom of	
tree: why no grass? (Lack of light), some	
plants are beginning to grow (adaptation –	
they're happy). Red Dead Nettles (do not	
sting) have a square, hollow stem – why do	
Still 8/ Have a square, Hollow Stelli Willy ao	

Science Curriculum

you think this is? (a good platform for	
alternative leaves).	
 Recognise similarities and differences 	
between plants and animals and differences	
•	
between plants and animals	
- Describe the simple features of habitats	
- Recognise a microhabitat as a small habitat	
(e.g. leaf litter, woodlice under stones)	
 Describe some microhabitats 	
Describe how animals obtain their food from plants	To make a food chain using living things
and other animals, using the idea of a simple food	from the field that they have seen.
chain, and identify and name different sources of	
food	
Construct a simple food chain (e.g. grass, cow,	
human). Around the perimeter of the field there are	
many different types of bushes and trees. E.g.	
elderberries and holly. Why do you think they are	
here? Link to food chain: birds eating berries >	
excreting → plants grow → elderberries / holly.	
Suggest reasons why different plants and animals	
are found in the different environments	
Observe how living things depend on each other, for	
example, plants serving as a source of food and	
shelter for animals.	

Working Scientifically: sorting and classifying things according to whether they are living, dead or were never alive, and recording their findings using charts. They should describe how they decided where to place things, exploring questions like: 'Is a flame alive? Is a deciduous tree dead in winter?' and talk about ways of answering their questions. They could construct a simple food chain that includes humans (eg, grass, cow, human). They could describe the conditions in different habitats and microhabitats (under log, on stony path, under bushes); and find out how the conditions affect the number and type(s) of plants and animals that live there

Year 3	Key Vocabulary: flower, leaf, seed, stem, roots, petal, pollen, life cycle, dispersal, pollination, fertilisation, germination, ovary, ovule, sepal, stamen, anther, filament, stigma, style	
Key Theme: Plants		
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Observe and describe how seeds and bulbs grow	Identify and describe the functions of different	Pupils can be introduced to the idea that
into mature plants Y2	parts of flowering plants: roots, stem/trunk, leaves	plants can make their own food, but at this
	and flowers.	stage they do not need to understand how
Find out and describe how plants need water,	- Pupils should be introduced to the relationship	this happens
light and a suitable temperature to grow and stay	between structure and function: the idea that every	
healthy Y2	part has a job to do.	
	- They should explore questions that <u>focus on the</u>	Explain why healthy roots and a healthy
	role of the roots and stem in nutrition and support,	stem are needed for plants to grow
	leaves for nutrition and flowers for reproduction.	Explain that differences in plant growth
	- Describe why healthy roots and a healthy stem are	are due to the amount of light and/or water
	needed for plants to grow	
	- Recognise that the leaves of a plant are associated	
	with healthy growth and more specifically nutrition	
	Visit the school field and in particular to the tree next	
	to the forest school sheds. The trunk has twisted to	
	support the weight of the branches which have	
	grown to one side (like carrying all of your shopping	
	in one hand). There is also an example of this in the	
	Nursery/Reception garden.	
	Nettles have square stems to gather more nutrients	
	and to have a stronger structure.	
	Flowers are colourful to attract insects. What are the	
	5 colours of flowers? (blue, red, yellow, white and	
	most common: green).	
	All flowers are there to reproduce. All seeds come	
	from flowers.	

	Using flower heads, pull apart, gently, to reveal the	
	structure including the pollen on the anthers.	
Find out and describe how plants need water,	Explore the requirements of plants for life and	
light and a suitable temperature to grow and stay	growth (air, light, water, nutrients from soil, and	
healthy	room to grow) and how they vary from plant to	
Note: Seeds and bulbs need water to grow but	plant

	state that movement depends on both skeleton	introduced to the main body parts
	and muscles	associated with the skeleton and muscles,
	state that when one muscle contracts another	finding out how different parts of the body
	relaxes	have special functions.

Working Scientifically: identifying and grouping animals with and without skeletons and observing and comparing their movement; exploring ideas about what would happen if humans did not have skeletons. They might compare and contrast the diets of different animals (including their pets) and decide ways of grouping them according to what they eat. They might research different food groups and how they keep us healthy, and design meals based on what they find out.

Year 3 Key Theme: Rocks LINK WITH GEOGRAPHY	Key Vocabulary: Rock, natural, man-made, igneous, metamorphic, sedimentary, fossils, living things, soil, compression, environment, organic, hard / soft, permeable/impermeable, density, durable, erosion, weathering	
Previous Learning To be reinforced	Core Learning Intentions Age Related	Extension Opportunities Next steps
Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses (y2)	Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. Linked with work in geography, pupils should explore different kinds of rocks and soils, including those in the local environment • classify rocks from the evidence of investigations • explain that rocks are used for different purposes dependent on their physical properties • explain that different types of rock react differently to physical forces (e.g. water, rubbing) Use the grounds to spot rocks where are they? Are the natural or man-made? Describe in simple terms how fossils are formed	relate the simple physical properties of some rocks to their formation explain how a model (e.g. biscuits, chocolate bars) can be used to represent sedimentary, metamorphic and igneous rocks Describe how Mary Anning discovered
	when things that have lived are trapped within rock	fossils • explain why we do not see the soft parts of animals in fossils
	Recognise that soils are made from rocks and organic matter. Linked with work in geography, pupils should explore different kinds of rocks and soils, including those in the local environment Recognise that soil contains dead plants and animals Recognise that there is rock under all surfaces and that soils come from rocks	Explain why we might find lots of the same types of rock in one place • explain why certain rocks are used for different purposes and why some rocks could be used for these jobs for example: Marble- kitchen worktops or statues Slate roof tiles Granite walls

Working Scientifically: observing rocks, including those used in buildings and gravestones, and exploring how and why they might have changed over time; using a hand lens or microscope to help them to identify and classify rocks according to whether they have grains or crystals, and whether they have fossils in them. Pupils might research and discuss the different kinds of living things whose fossils are found in sedimentary rock and explore how fossils are formed. Pupils could explore different soils and identify similarities and differences between them and investigate what happens when rocks are rubbed together or what changes occur when they are in water. They can raise and answer questions about the way soils are formed.

Year 3	Key vocabulary: force, push, pull, friction, surface, magnet, magnetic, magnetic field, pole, north,	
Key Theme: Forces and Magnets	south, attract, repel, compass	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps

more than one thing (metal can be used for coins,		
cans, cars and table legs; wood can be used for		
matches, floors, and telegraph poles) or different		

materials are used for the same thing (spoons can		
be made from plastic, wood, metal, but not		
normally from glass).		
	Observe how magnets attract or repel each other	
	and attract some materials and not others	
	describe the difference between a magnet and a	
	magnetic material	
	describe what happens when some materials are	
	put near a magnet	
	Compare and group together a variety of everyday	Describe some everyday uses of magnets
	materials on the basis of whether they are	Explain that a compass works by lining up
	attracted to a magnet, and identify some magnetic	with the Earth's magnetic field
	materials	
	They should explore the behaviour and everyday	
	uses of different magnets (for example, bar, ring,	
	button and horseshoe).	
	Describe the difference between a magnet and a	
	magnetic material	
	Describe what happens when some materials are	
	put near a magnet	
	Describe magnets as having 2 poles	Describe how lodestone was found to be a
	Recall that magnets have a north and a south pole	naturally occurring magnet and was used as
		the first compass for navigation
	Predict whether 2 magnets will attract or repel	
	each other, depending on which poles are facing	
Washing Colonification and a single state of the same things	Describe the direction of forces between magnets	

Working Scientifically: comparing how different things move and grouping them; raising questions and carrying out tests to find out how far things move on different surfaces, and gathering and recording data to find answers to their questions; exploring the strengths of different magnets and finding a fair way to compare them; sorting materials into those that are magnetic and those that are not; looking for patterns in the way that magnets behave in relation to each other and what might affect this, for example, the strength of the magnet or which pole faces another; identifying how these properties make magnets useful in everyday items and suggesting creative uses for different magnets.

Year 3	Key Vocabulary: light, source, dark, shadows, reflect, visible, sun, opaque, absence, bounce, mirror, ray, beam, glare, pupil, retina, travel, straight, translucent, transparent, block	
Key Theme: Light		
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
EYFS: puppet shadows	Recognise that they need light in order to see things and that dark is the absence of light • describe and compare some light sources • state that light sources are seen when light from them enters the eyes • explain that places are dark because there is no light and a light source is needed to help us see in such places	Describe how nocturnal animals are adapted to use what little light there is or their other senses in the dark (e.g. cats, aye-aye, lemurs)
Y1: Observe and describe weather associated with the seasons and how day length varies Pupils should be warned that it is not safe to look directly at the sun, even when wearing dark glasses.	Notice that light is reflected from surfaces Should explore what happens when light reflects off a mirror or other reflective surfaces, including playing mirror games to help them to answer questions about how light behaves. E.g. • demonstrate light travelling using a torch and record light bouncing off a mirror • identify suitable reflective clothing for travelling in the dark • explain that they cannot see shiny objects in the dark because there are no light sources	Describe how Percy Shaw invented cat's eyes and explain their importance to road safety
	Recognise that light from the sun can be dangerous and that there are ways to protect their eyes They should think about why it is important to protect their eyes from bright lights. Note: pupils should be warned that it is not safe to look directly at the sun, even when wearing dark glasses.	

	 Recognise that shadows are formed when the light from a light source is blocked by an opaque object They should look for, and measure, shadows, and find out how they are formed and what might cause the shadows to change e.g. recognise that shadows are similar in shape to the objects forming them explain that shadows are formed when light from a source is blocked state that even transparent objects block some light and form shadows describe the difference in shadows cast by opaque, translucent and transparent materials explore how to make shadows of different shapes and sizes 	Use ideas about shadows to make predictions about the shadows formed by different objects or materials
	Find patterns in the way that the size of shadows change	Describe how the length of a shadow changes throughout the day as the sun moves across the sky
Working Scientifically: looking for patterns in what happens to shadows when the light source moves or the distance between the light source and the object changes.		

Year 4 Key Theme: Living things and their habitats (taught over two half terms – large unit of work)	Key Vocabulary: organism, variation, classification (insect, mammal, bird, reptile, amphibian, fish) invertebrate, vertebrates, global, local, characteristic, key, habitat, environment, wildlife, endangered, extinct, conservation	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps

Explore and compare the differences between things that are living, dead, and things that have never been alive Y2	Recognise that living things can be grouped in a variety of ways Explore possible ways of grouping a wide selection of living things that include animals and flowering plants and non-flowering plants. Pupils could begin to put vertebrate animals into groups such as fish, amphibians, reptiles, birds, and mammals; and invertebrates into snails and slugs, worms, spiders, and insects. Note: Plants can be grouped into categories such as flowering plants (including grasses) and non-flowering plants, such as ferns and mosses.	Explain why it is necessary to use a reasonably large sample when investigating the preferences of small invertebrates
Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other Y2	Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment - Describe some of the characteristics of the vertebrate (fish, mammals, amphibians, reptiles and birds) groups (e.g. warm-blooded, have fur, lay eggs)	Explain why some animals are hard to classify (e.g. platypus, echidna, bat, flightless birds)
Identify and name a variety of plants and animals in their habitats, including microhabitats. Y2	Recognise that environments can change and that this can sometimes pose dangers to living things. Identify how the habitat changes throughout the year Explore examples of human impact (both positive and negative) on environments, for example, the positive effects of nature reserves, ecologically planned parks, or garden ponds, and the negative effects of population and development, litter or deforestation • explain that different organisms are found in different habitats because of differences in	Describe how humans have negatively impacted environments (e.g. pollution, deforestation, introduction of invasive species)

	environmental factors	
Describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food Y2	Use the local environment throughout the year to raise and answer questions that help them to identify and study plants and animals in their habitat.	
Explore and compare the differences between things that are living, dead, and things that have never been alive Y2	Construct and interpret a variety of food chains, identifying producers, predators and prey (Teacher Note: statement moved from NC 'Animals including humans' to improve progression within topics) - recognise that green plants are the ultimate source of food for all animals - recognise that a food chain must always start with a green plant (a producer) - represent feeding relationships within a habitat with food chains beginning with a green plant which 'produces' food for the other organisms - use and understand the terms: producer, predator and prey - know the function of some of the more complex features which aid survival in specific habitats (e.g. gills, blubber, camouflage) - describe why different animals and plants live in different habitats	Use food chains to predict what might happen to the numbers of an organism if there are suddenly more predators or less prey

Working Scientifically

Use and make <u>simple guides or keys</u> to explore and identify local plants and animals; making a guide to local living things; raising and answering questions based on their observations of animals and what they have found out about other animals that they have researched.

Year 4	Key Vocabulary: amplitude, volume, quiet, loud, ear, pitch, high, low, particles, instrument,	
Key Theme : Sound	wave, sound, travel, vibrations	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Identify, name, draw and label the basic parts of	Identify how sounds are made, associating some of	
the human body and say which part of the body is	them with something vibrating	
associated with each sense. Y1	Explore and identify the way sound is made through	
*senses afternoon (linked to mindful tasting)	vibration in a range of different musical instruments	
•compare differences in texture, sounds and	from around the world:	
smells	• identify what is vibrating in a range of musical instruments	
	• generalise that sounds are produced when objects vibrate	
	describe how sounds are generated by specific	
	objects	
	suggest ways of producing sounds	
	Recognise that vibrations from sounds travel	•Recognise that sounds travel through
	through a medium to the ear	solids, water and air
		Explore how sound travels through a
		variety of materials
		Identify suitable materials to use for
		sound insulation
		Recognise that sound can be reflected
		from a surface which can cause an echo
		Describe how some animals use echo-
	Find nottone hatman the witch of a count out	location
	Find patterns between the pitch of a sound and	Describe ways in which the pitch of a sound
	features of the object that produced it	made by a particular instrument or vibrating object can be raised or lowered

		Group instruments independently by the way sounds are produced
	Find patterns between the volume of a sound and	Group instruments independently by the
	the strength of the vibrations that produced it	way sounds are produced
	suggest how to change the loudness of the sounds	
	produced by a range of musical instruments	
	Find out how the pitch and volume of sounds can be	Generalise the effects of changes on sound
	changed in a variety of ways.	(e.g. the tighter the tension the higher the
	 distinguish between pitch and volume (loudness) 	pitch)
	 know that altering vibrations alters the pitch or 	
	volume	
	 explore how to vary the pitch and volume of 	
	sounds from a variety of objects or instruments	
	Recognise that sounds get fainter as the distance	
	from the sound source increases.	
	describe what they observe when they move further	
	away from the source of a sound	
Marking Scientifically:		

Working Scientifically:

Find patterns in the sounds that are made by different objects such as saucepan lids of different sizes or elastic bands of different thicknesses. They might make earmuffs from a variety of different materials to investigate which provides the best insulation against sound. They could make and play their own instruments by using what they have found out about pitch and volume.

Year 4 Key Theme : Electricity	<u>Key Vocabulary:</u> electricity, neutrons, protons, electrons, nucleus, atom, electric current, appliances, mains, crocodile clip, wires, bulb, bulb holder, battery (cell), battery holder, motor, buzzer, switch, electrical conductor, electrical insulator.	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps

Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. Children have explored what metal is used for e.g. coins, cans, cars. However, they have not explored 'electricity'. Y2	Identify common appliances that run on electricity	
	Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers Pupils should construct simple series circuits, trying different components, for example, bulbs, buzzers and motors, and including switches, and use their circuits to create simple devices • Draw the circuit as a pictorial representation, not necessarily using conventional circuit symbols at this stage; these will be introduced in year 6.	Are methodical in tracing faults in simple circuits
	 Make circuits from drawings provided Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery describe the effect of making and breaking one of the contacts on a circuit 	
	 explain why some circuits work and others do not Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit describe how switches work construct a home-made switch 	

Recognise some common conductors and insulators, and associate metals with being good conductors. construct simple circuits and use them to test whether materials are electrical conductors or insulators	 relate knowledge about conductors and insulators to their use in electrical appliances describe the use of conductors and insulators in components including connecting wires identify graphite and playdough as nonmetal conductors and explain why this is unusual
Note: Pupils might use the terms current and voltage, but these should not be introduced or defined formally at this stage. Pupils should be taught about precautions for working safely with electricity.	

Working Scientifically: observe patterns, for example, that bulbs get brighter if more cells are added, that metals tend to be conductors of electricity, and that some materials can and some cannot be used to connect across a gap in a circuit.

Year 4 Key Theme : Animals including humans	Key Vocabulary: digestive system, teeth, tongue, mouth, oesophagus, stomach, gall bladder, small intestine, pancreas, rectum, anus, large intestine, liver, duodenum; Teeth, tooth, canine, incisor, molar, premolar; Producer, consumer, predator, prey	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Identify that animals, including humans, need the	Describe the simple functions of the basic parts of	Explain why food needs to be broken down
right types and amount of nutrition, and that they	the digestive system in humans for example:	
cannot make their own food; they get nutrition	mouth, tongue, teeth, oesophagus, stomach, and	
from what they eat. Y3	small and large intestine	
	 describe the role of each organ in the digestive 	
	system	

	Explore questions that help them to understand their special functions	
Identify that humans and some other animals have skeletons and muscles for support, protection and movement. Y3 • describe some observable characteristics of bones • describe the main functions of their skeletons • state that movement depends on both skeleton and muscles • state that when one muscle contracts another relaxes	Identify the different types of teeth in humans and their simple functions • describe the role of each type of teeth in digestion • explain how they should look after their teeth and recognise why they need to do so	Explain why humans do not have a full set of adult teeth at birth explain why dentists are concerned about the amount of sugar children have
	Construct and interpret a variety of food chains, identifying producers, predators and prey (could also be taught with Animals and their habitats). state that animals have different diets and may have different kinds of teeth • know the function of some of the more complex features which aid survival in specific habitats (e.g. gills, blubber, camouflage) • describe why different animals and plants live in different habitats Teach within living things and their habitats: • recognise that green plants are the ultimate source of food for all animals (• recognise that a food chain must always start with a green plant (a producer) • represent feeding relationships within a habitat with food chains beginning with a green plant which 'produces' food for the other organisms	Explain why the teeth of certain types of animals need to be different Explain how fossilised teeth give us clues about an animals' diet

Science Curriculum

• use and understand the terms: producer, predator and prey

Working Scientifically: comparing the teeth of carnivores and herbivores and suggesting reasons for differences; finding out what damages teeth and how to look after them. They might draw and discuss their ideas about the digestive system and compare them with models or images.

Year 4	Key Vocabulary: solid, liquid, gas, particles, state, materials, properties, matter, melt, freeze, water, ice,	
Key Theme : States of matter	temperature, process, condensation, evaporation, water vapour, energy, precipitation, collection.	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Observe changes across the 4 seasons	Compare and group materials together, according to whether	Describe the behaviour and properties of

associated with chemical change, for example, through baking or	
burning	
Describe how when ice melts it turns to liquid and how when	
water freezes it becomes ice	
Describe how these processes can be reversed	
Describe how liquids evaporate to form gases and how gases	
condense to form liquids	
 explain the relationship between liquids and gases in 	
terms of evaporation and condensation	
Identify the part played by evaporation and condensation in the	
water cycle and associate the rate of evaporation with	
temperature.	
Sequence the changes that happen in the water cycle	
Describe the water cycle in terms of these processes	
Explain the relationship between liquids and solids in terms of	
melting and freezing	
Know that temperature can affect the rate of evaporation or	
condensation	
Describe the effect of temperature on evaporation	
Explain how changing conditions affects processes such as	
evaporation and condensation	

Science Curriculum

• Identify a range of contexts in which changes take place (e.g. evaporation of puddles in the school playground or from clothes on the washing line, condensation in the bathroom)

Working Scientifically: group and classify a variety of different materials; exploring the effect of temperature on substances such as chocolate, butter, cream (for example, to make food such as chocolate crispy cakes and ice-cream for a party). They could research the temperature at which materials change state, for example, when iron melts or when oxygen condenses into a liquid. They might observe and record evaporation over a period of time, for example, a puddle in the playground or washing on a line, and investigate the effect of temperature on washing drying or snowmen melting.

Year 5 Key Theme: Earth and Space	Key Vocabulary: Earth, Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn, Uranus, Neptune, Planets, Solar System, day, night, rotate, orbit, axis, spherical, geocentric, heliocentric Scientists/mathematicians: Ptolemy, Alhazen and Copernicus		
Previous Learning	Core Learning Intentions	Extension Opportunities	
To be reinforced	Age Related	Next steps	
Observe changes across the 4 seasons	Describe the movement of the Earth, and other planets,	Explain that gravity is a force of attraction	
Y1	relative to the Sun in the solar system	and it is what holds the planets in orbit	
Observe and describe weather associated	Pupils should learn that the Sun is a star at the centre of	around the Sun and the Moon in orbit	
with the seasons and how day length varies	our solar system and that it has eight planets: Mercury,	around the Earth	
	Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune	use simple physical models to explain	
	(Pluto was reclassified as a 'dwarf planet' in 2006).	effects that are caused by the movement of	
		the Earth	
Y3 Light	Describe the movement of the Moon relative to the	Explain that the changes in the	
Recognise that they need light in order to see	Earth	appearance of the Moon over a period of	
things and that dark is the absence of light		28 days arise from the Moon orbiting the	
		Earth once every 28 days	
Notice that light is reflected from surfaces			
Recognise that light from the sun can be			
dangerous and that there are ways to protect			
their eyes			

Recognise that shadows are formed when the light from a light source is blocked by an opaque object		
Find patterns in the way that the size of shadows change		
	Describe the Sun, Earth and Moon as approximately	
	spherical bodies	
	They should understand that a moon is a celestial body	
	that orbits a planet (Earth has one moon; Jupiter has four	
	large moons and numerous smaller ones).	
	Use the idea of the Earth's rotation to explain day and	
	night and the apparent movement of the sun across the	
	sky.	
	Pupils should be introduced to a model of the Sun and	
	Earth that enables them to explain day and night	
	•Recognise that it is daylight in the part of the Earth facing the Sun	
	Explore and describe how a shadow from the Sun	
	changes over the course of a day	
	Explain in terms of the rotation of the Earth why	
	shadows change and the Sun appears to move across the	
	sky during the course of the day	
	Explain why it is night time in Australia when it is day	
	time in England	
	Note : Pupils should be warned that it is not safe to look	
	directly at the Sun, even when wearing dark glasses.	
	Pupils should find out about the way that ideas about the	Explain how ideas about the solar system
	solar system have developed, understanding how the	have changed over time
	geocentric model of the solar system gave way to the	

heliocentric model by considering the work of scientists	Katherine Johnson – NASA'S human

	Mae C Jemison – 1 st African American
	female astonaught

<u>Working Scientifically:</u> compare the time of day at different places on the Earth through internet links and direct communication; creating simple models of the solar system; constructing simple shadow clocks and sundials, calibrated to show midday and the start and end of the school day; finding out why some people think that structures such as Stonehenge might have been used as astronomical clocks.

Year 5 Key Theme: Forces (teach with history topic of WW1/2 – parachutes)	<u>Key Vocabulary:</u> force, push, pull, opposing, balanced, gravity, air resistance, water resistance, friction, Isaac Newton, Galileo Galilee, streamline, brake, gear, mechanism, lever, cog, pulley, machine	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Y3 Forces and Magnets	Explain that unsupported objects fall towards the Earth	
Compare how things move on different	because of the force of gravity acting between the Earth	
surfaces	and the falling object	
Notice that some forces need contact	Identify weight as a force	
between 2 objects, but magnetic forces can	Draw force diagrams with arrows showing the direction	
act at a distance	of forces acting on an object	
	 Observe and explore the effect of several forces on 	
Observe how magnets attract or repel each	objects	
other and attract some materials and not	Describe some situations in which there is more than	
others	once force acting on an object	
	Describe and explain the motion of some familiar	
Compare and group together a variety of	objects in terms of several forces acting on them	
everyday materials on the basis of whether	Identify forces on an object as either balanced or	
	unbalanced	

they are attracted to a magnet, and identify some magnetic materials Describe magnets as having 2 poles Predict whether 2 magnets will attract or repel each other, depending on which poles are facing	 Use the terms 'balanced' and unbalanced' when describing several forces on an object Explain that balanced forces on an object cause it to remain stationary or travel at the same speed Explain that unbalanced forces on an object cause it to speed up, change shape or slow down Pupils might find out how scientists, for example, Galileo Galilei and Isaac Newton helped to develop the theory of gravitation. 	
	 Identify the effects of air resistance, water resistance and friction, that act between moving surfaces Explore falling objects and raise questions about the effects of air resistance. Understand that air resistance is the frictional force of air on objects moving through it Explore the effects of air resistance by observing how different objects such as parachutes and sycamore seeds fall. Experience forces that make things begin to move, get faster or slow down Pupils should explore the effects of friction on movement and find out how it slows or stops moving objects, for example, by observing the effects of a brake on a bicycle wheel. Describe some of the factors that increase friction between solid surfaces and increase air and water resistance Describe situations in which frictional forces are helpful as well as those in which frictional forces are unhelpful 	Compare the tread on bicycle tyres according to how much friction they need

Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect. Pupils should explore the effects of levers, pulleys, gears and simple machines on movement.	 Describe how levers, pulleys and gears are used in everyday life (e.g. having gears can make it easier to pedal a bike, a bottle opener makes it easier to open a bottle lid) Explain how introducing gears onto bikes has changed cycling Identify streamlined objects and describe why they have been designed in this way (e.g. cycling helmets, formula 1 cars, dolphins)
--	---

<u>Working Scientifically:</u> explore falling paper cones or cup-cake cases, and designing and making a variety of parachutes and carrying out fair tests to determine which designs are the most effective. They might explore resistance in water by making and testing boats of different shapes. They might design and make products that use levers, pulleys, gears and/or springs and explore their effects.

Year 5 Key Theme: Properties and changes of materials (taught over two half terms)	Key Vocabulary: material, property, magnetic, hard, transparent, flexible, permeable, Thermal, conductor, insulator, heat, variable, electric, resistance, circuit, dissolve, soluble, insoluble, liquid, solid, separate, mixture, solution, suspension, evaporate, filter, sieve, magnet, attract, Particles, reversible, irreversible, physical, chemical, reaction, reactant, product.	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced:	Age Related	Next steps
Pupils should build a more systematic understanding of materials by exploring and comparing the properties of a broad range of materials, including relating these to what they learnt about magnetism in year 3 and about electricity in year 4. (See below)	Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. Note: pupils are not required to make quantitative measurements about conductivity and insulation at	Explain why some materials are good thermal insulators
	this stage. It is sufficient for them to observe that some conductors will produce a brighter bulb in a	

	circuit than others and that some materials will feel hotter than others when a heat source is placed against them. Safety guidelines should be followed when burning materials. • Suggest why particular materials are used for different jobs depending on their properties	
 Y3 Magnetism Notice that some forces need contact between two objects, but magnetic forces can act at a distance Observe how magnets attract or repel each other and attract some materials and not others Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials Describe magnets as having two poles Predict whether two magnets will attract or repel each other, depending on which poles are facing. 	know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution Name some materials that will and some that will not dissolve in water Recognise that although it is not possible to see a dissolved solid, it remains in the solution Describe melting and dissolving and give everyday examples of each Identify and explore factors that affect the rate at which a solid dissolves Separate an undissolved solid from a liquid by filtering Recognise that an undissolved solid can be separated from liquid by filtering Recognise that a solid can be recovered from a solution by evaporation	Describe the difference between melting and dissolving Recognise that inks and dyes are often mixtures of different colours and these can be separated by chromatography Explain why ink or dye moves up the paper in chromatography
 Y4 States of Matter Compare and group materials together, according to whether they are solids, liquids or gases Observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C) 	Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating • Describe the properties of mixtures which can be separated by filtration	

Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.	 Describe some methods that are used to separate simple mixtures Explain that when solids dissolve they break up so small they can pass through the holes in the filter paper Use knowledge about how a specific mixture can be separated to suggest ways in which other similar mixtures might be separated Recognise that some changes can be reversed and some cannot 	
 Y4 Electricity Identify common appliances that run on electricity Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit Recognise some common conductors and insulators, and associate metals with being good conductors. 	Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic	
	Demonstrate that dissolving, mixing and changes of state are reversible changes. They should explore reversible changes, including evaporating, filtering, sieving, melting and dissolving, recognising that melting and dissolving are different processes: Observe and explore a variety of chemical changes (e.g. burning)	

Science Curriculum

Identify whether some changes are reversible or	
not	
 Classify some changes as reversible (e.g. dissolving) 	
and others as irreversible (e.g. burning)	
Recognise that irreversible changes often make	
new and useful materials	
• Describe what happens when acid and bicarbonate	
of soda are mixed	
Explain that some changes result in the formation	They should find out about how chemists
of new materials, and that this kind of change is not	create new materials, for example, Spencer
usually reversible, including changes associated	Silver, who invented the glue for sticky
with burning and the action of acid on bicarbonate	notes or Ruth Benerito, who invented
of soda Pupils should explore changes that are	wrinkle-free cotton.
difficult to reverse, for example, burning, rusting and	
other reactions, for example, vinegar with	Describe the properties of new materials
bicarbonate of soda.	(e.g. aerogel, silly putty, wrinkle-free
• Explain that in some cases the new materials made	cotton)
are gases and identify some evidence for the	
production of gases (e.g. vigorous bubbling)	

Working Scientifically: carry out tests to answer questions, for example, 'Which materials would be the most effective for making a warm jacket, for wrapping ice cream to stop it melting, or for making blackout curtains?' They might compare materials in order to make a switch in a circuit. They could observe and compare the changes that take place, for example, when burning different materials or baking bread or cakes. They might research and discuss how chemical changes have an impact on our lives, for example, cooking, and discuss the creative use of new materials such as polymers, supersticky and super-thin materials.

Year 5 Key Theme: Animals including humans (teach / merge with Living things and their habitats)	Key Vocabulary: Egg, sperm, fetus, baby, toddler, child, teenager, adult, old age, development, growth, human, infancy, childhood, adulthood, adolescence, prenatal, changes, breasts, pubic hair, hips, facial hair, body hair, genitals, muscular development, menstruation.	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Y2 Notice that animals, including humans, have	Describe the changes as humans develop to old age	
offspring which grow into adults	Pupils should draw a timeline to indicate stages in	
	the growth and development of humans.	
Y3 Identify that animals, including humans, need the		
right types and amount of nutrition, and that they		
cannot make their own food; they get nutrition from		
what they eat.		
Identify that humans and some other animals have skeletons and muscles for support, protection and		
movement. Y3		
Y4: Describe the simple functions of the basic	They should learn about the changes experienced in	
parts of the digestive system in humans for	puberty.	
example: mouth, tongue, teeth, oesophagus,	- describe the simple functions of parts of the	
stomach, and small and large intestine	human reproductive system	
Y4:Identify the different types of teeth in humans	-	
and their simple functions		
Construct and interpret a variety of food chains,		
identifying producers, predators and prey		
Working Scientifically: by researching the gestation	periods of other animals and comparing them with hum	ans: by finding out and recording the length

Working Scientifically: by researching the gestation periods of other animals and comparing them with humans; by finding out and recording the length and mass of a baby as it grows.

Science Curriculum

Year 5

Key Theme: Living things and their habitats

Flowers. Dissect: Primroses/daffodils

Propagate: Basil

<u>Key Vocabulary:</u> sexual, asexual, reproduction, cell, fertilisation, pollination, male, female, pregnancy, gestation, young, Jane Goodall, mammal, metamorphosis, amphibian, insect, egg, embryo, bird, plant (mammals: monotremes, marsupials, placental)

Propagate: Basii		
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Y4	Describe the differences in the life cycles of a	Explain what is unusual about the life cycle
Recognise that living things can be grouped in a variety	mammal, an amphibian, an insect and a bird	of a kangaroo or koala
of ways	recognise the similarities in the life cycles of plants,	-
Explore possible ways of grouping a wide selection of	animals and humans	
living things that include animals and flowering plants		
and non-flowering plants. Pupils could begin to put		
vertebrate animals into groups such as fish, amphibians,		
reptiles, birds, and mammals; and invertebrates into		
snails and slugs, worms, spiders, and insects.		
Note: Plants can be grouped into categories such as		
flowering plants (including grasses) and non-flowering		
plants, such as ferns and mosses.		
Explore and use classification keys to help group,		
identify and name a variety of living things in their local and wider environment		
- Describe some of the characteristics of the vertebrate		
(fish, mammals, amphibians, reptiles and birds) groups		
(e.g. warm-blooded, have fur, lay eggs)		
	Describe the life process of reproduction in some	Plants that have been reproduced have a
	plants and animals.	'brother and sister' and these are identical
	Find out about different types of reproduction,	opposites. If you bought two or three pots
	including sexual and asexual reproduction in plants,	of the same Primroses (January). from B&Q
	and sexual reproduction in animals:	you would see this
	Describe the functions of some parts of a flower	you would see this
	- Describe the functions of some parts of a nower	

Science Curriculum

- Describe the main functions of parts of a plant involved in reproduction (see below, use primroses)
- Describe the processes of sexual and asexual reproduction in plants. Use basil to take cuttings and grow exact clones from its parent plant.
- Compare methods of seed dispersal
- Know that most animals reproduce by sexual reproduction compare methods of seed dispersal
- Know that most animals reproduce by sexual reproduction

Using the school grounds: Seed dispersal: hazelnut tree (shows male and female parts) – in forest school - (wind pollination). Show children the catkins (no scent, not pretty to look at, no colour). Can drop the catkins on a black piece of card and watch the pollen come out. (see video for guidance in the science folder) In addition – squirrels burying nuts, they only find 95% of them. The rest grow into trees. Birds eating berries and then excreting causing further plants to grow e.g. holly, elder Insect pollination: using flower heads rather than diagrams on the board. Buy a pot of Primroses (£1.75 from B&Q). this will contain approx. 15 flowers. Children to place thumbs either side if the flower head and gently pull apart to reveal the structure of the flower (male and female parts).

- Compare internal and external fertilisation in animals
- Explain that living things need to reproduce if the species is to survive
- Compare gestation periods (pregnancy) of different animals

Study and raise questions about their local environment throughout the year (our school grounds are perfect for this – see above notes) Links to history: WW1: sticky weed, which can be found around the outside of the field, was used to bring down swelling. Stinging nettles, the Roman's brought in for flagellating; to circulate blood in order to keep warm and for medicine.	
Observe life-cycle changes in a variety of living things, for example, plants in the vegetable garden or flower border, and animals in the local environment	
Find out about the work of naturalists and animal behaviourists, for example, David Attenborough and Jane Goodall.	George Washington Carver developed hundreds of products using the peanut, sweet potatoes and soybeans. He also was a champion of crop rotation and agricultural education.

<u>Working Scientifically:</u> observe and compare the life cycles of plants and animals in their local environment with other plants and animals around the world (in the rainforest, in the oceans, in desert areas and in prehistoric times), asking pertinent questions and suggesting reasons for similarities and differences. They might try to grow new plants from different parts of the parent plant (basil), for example, seeds, stem and root cuttings, tubers, bulbs. They might observe changes in an animal over a period of time (for example, by hatching and rearing chicks), comparing how different animals reproduce and grow.

Year 6 Key Theme: Living Things and Their Habitats: Classification	Key Vocabulary: classify, compare, bacteria, characteristics, classification, microorganism, organism, invertebrates (spider, worm, insect, snail), vertebrates (mammal, bird, amphibian, reptile, fish), flowering, non-flowering, Carl Linnaeus	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced Pupils should build on their learning about grouping living things in year 4 by looking at the classification system in more detail. Y4 Recognise that living things can be grouped in a variety of ways Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment Y5 Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird Describe the life process of reproduction in some plants and animals.	Age Related Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals • Understand why classification is important Introduce the idea that broad groupings, such as micro-organisms, plants and animals can be subdivided. • Describe how micro-organisms feed, grow and reproduce like other organisms • Recognise that there are useful micro-organisms which can be used in food production • Explain how micro-organisms can move from one food source to another or from one animal to another	Next steps Compare the rate of reproduction in microorganisms to other animals Describe how the development of the microscope has contributed to our understanding of microorganisms Describe how ideas about hygiene have changed over time (e.g. Semmelweis)
	Give reasons for classifying plants and animals based on specific characteristics Through direct observations where possible, they should classify animals into commonly found invertebrates (such as insects, spiders, snails, worms) and vertebrates (fish, amphibians, reptiles, birds and mammals). They should discuss reasons	Devise own keys to classify organisms and objects

Science Curriculum

why living things are placed in one group and not another.	
Find out about the significance of the work of scientists such as Carl Linnaeus, a pioneer of classification.	Describe early ideas about classification (e.g. Aristotle)

<u>Working Scientifically:</u> use classification systems and keys to identify some animals and plants in the immediate environment. They could research unfamiliar animals and plants from a broad range of other habitats and decide where they belong in the classification system.

Describe evidence, from investigations, that yeast is living

Year 6 Key Theme : Animals including humans: The Circulatory System	Key Vocabulary: System, human, body, circulatory, circulation, skeletal, muscular, digestive, organs, parts, heart, lungs, blood vessels, aorta, atrium, ventricle, artery, vein, pulmonary, superior vena cava, inferior, pulmonic, aortic valve, trachea, bronchus, bronchiole, diaphragms, air sacs, alveoli, capillary, intercostal muscles and ribs. Nutrients, nutrition, water, system, digestive, skeletal, muscular, stomach, gall bladder, liver, small intestine, large intestine, pancreas, liver, kidneys, rectum, bladder, Healthy, lifestyle, diet, exercise, nutrition, nutrients, food, water, cells, body, human, organs, vitamins, minerals, protein, fats, carbohydrates, water, fibre, oxygen, pulse, heart rate,	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Y3 Identify that humans and some other animals	Identify and name the main parts of the human	explain the effect of diet on particular
have skeletons and muscles for support,	circulatory system, and describe the functions of	organs of the body / aspects of health
protection and movement.	the heart, blood vessels and blood	explain the effect of exercise on particular
	Pupils should build on their learning from years 3	organs of the body/aspects of health
Y4: Describe the simple functions of the basic	and 4 about the main body parts and internal organs	explain how ideas about the circulatory
parts of the digestive system in humans for	(skeletal, muscular and digestive system) to explore	system have changed over time
example: mouth, tongue, teeth, oesophagus,	and answer questions that help them to understand	
stomach, and small and large intestine	how the circulatory system enables the body to	
	function.	

Science Curriculum

	 describe the different functions of the blood (e.g. 	
	transporting and protecting)	
	 know that the blood comes from the heart in 	
	arteries and returns to the heart in veins	
	 know that blood carries oxygen and other essential 	
	materials around the body	
Y5: Describe the changes as humans develop to	Recognise the impact of diet, exercise, drugs and	explain how ideas about smoking have
old age	lifestyle on the way their bodies function	changed over time
Pupils should draw a timeline to indicate stages in	Pupils should learn how to keep their bodies healthy	explain why advice on diet changes
the growth and development of humans.	and how their bodies might be damaged – including	(e.g. butter vs margarine, five a day, tax on
·	how some drugs and other substances can be	sugary drinks)
	harmful to the human body.	
	 recognise that care needs to be taken with 	Marie M Daly. Her work opened a new
	medicines and that they can be dangerous	understanding of how foods and diet can
	• give several reasons why it is sometimes necessary	affect the health of the heart and the
	to take medicines	circulatory system
	 identify some harmful effects of drugs 	
	 name the major groups into which food is 	
	categorised and identify sources for each group	
	 describe the main function of organs of the human 	
	body	
They should learn about the changes experienced	Describe the ways in which nutrients and water are	
in puberty.	transported within animals, including humans	
	 know that the blood comes from the heart in 	
	arteries and returns to the heart in veins	
	 know that blood carries oxygen and other essential 	
	materials around the body	
Working Scientifically: exploring the work of scient	ists and scientific research about the relationship between	en diet, exercise, drugs, lifestyle and health.

Working Scientifically: exploring the work of scientists and scientific research about the relationship between diet, exercise, drugs, lifestyle and health E.G. discover that during exercise the heart beats faster to take blood more rapidly to the muscles; make careful measurements of pulse rate

Science Curriculum

Year 6	Key Vocabulary: shadow, light, filter, colour, reflect, absorb, refract, spectrum, wavelength,	
Key Theme : light	prism, visible, lens, angle, incidence, straight, ray, beam, wave, photon, energy.	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Pupils should build on the work on light in year 3, exploring the way that light behaves, including light sources, reflection and shadows. They should talk about what happens and make predictions. Year 3 (Light) Recognise that they need light in order to see things and that dark is the absence of light Notice that light is reflected from surfaces Recognise that light from the sun can be dangerous and that there are ways to protect their eyes Recognise that shadows are formed when the light from a light source is blocked by an opaque object Find patterns in the way that the size of shadows change	Recognise that light appears to travel in straight lines Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye Understand that in order to be seen, all non-luminous objects must reflect light Diagrammatically represent light from sources and bouncing off reflective surface using arrows	Know that, when sunlight passes through some objects, coloured light is produced (for example in rainbows, soap bubbles and prisms) Describe how curved mirrors distort a reflection
Y5 Earth and Space:	Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes • Draw diagrams to illustrate how light is travelling from the source to the eye	
Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky. Pupils should be introduced to a model of the Sun and Earth that enables them to explain day and night	Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them. • Describe a variety of ways of changing the size of the shadow produced by an object	

Science Curriculum

- •Recognise that it is daylight in the part of the Earth facing the Sun
- Explore and describe how a shadow from the Sun changes over the course of a day
- Explain in terms of the rotation of the Earth why shadows change and the Sun appears to move across the sky during the course of the day
- Explain why it is night time in Australia when it is day time in England
- Describe the relationship between the size of a shadow and the distance between the light source and an object
- Diagrammatically represent the formation of shadows using arrow convention

Working Scientifically: decide where to place rear-view mirrors on cars; designing and making a periscope and using the idea that light appears to travel in straight lines to explain how it works. They might investigate the relationship between light sources, objects and shadows by using shadow puppets. They could extend their experience of light by looking a range of phenomena including rainbows, colours on soap bubbles, objects looking bent in water and coloured filters (they do not need to explain why these phenomena occur).

Year 6 Key Theme: Evolution and Inheritance (taught over two half terms)	<u>Key Vocabulary:</u> evolution, adaptation, inherited traits, inheritance, adaptive traits, natural selection, DNA, genes, variation, parent, offspring, fossil, environment, habitat, fossilisation, plants, animals, living things. Charles Darwin, Alfred Wallace,	
Previous Learning	Core Learning Intentions	Extension Opportunities
To be reinforced	Age Related	Next steps
Building on what they learned about fossils in the	Recognise that living things have changed over time	
topic on rocks in year 3, pupils should find out	and that fossils provide information about living	Describe the story of the peppered moth
more about how living things on earth have	things that inhabited the Earth millions of years ago	and how this provides evidence for natural
changed over time.	Explain why we do not have a complete fossil	selection
	record	
<u>Y3</u>	Recognise that living things produce offspring of	explain how antibiotic resistant
Compare and group together different kinds of	the same kind, but normally offspring vary and are	bacteria provide evidence for natural
rocks on the basis of their appearance and simple	not identical to their parents	selection
physical properties	be introduced to the idea that characteristics are	explain why we can see evidence
	passed from parents to their offspring, for instance	for natural selection in fast reproducing
	by considering different breeds of dogs, and what	organisms like bacteria (e.g. antibiotic

Describe in simple terms how fossils are formed when things that have lived are trapped within rock Recognise that soils are made from rocks and organic matter.	happens when, for example, Labradors are crossed with poodles	resistant bacteria and pesticide resistant insects) •
Y5 Animals including humans Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird Describe the life process of reproduction in some plants and animals	Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution. that variation in offspring over time can make animals more or less able to survive in particular environments, for example, by exploring how giraffes' necks got longer, or the development of insulating fur on the arctic fox • Explain how being well adapted to an environment means an organism is more likely to survive	Explain that animals which are better adapted to an environment are more likely to survive, reproduce and pass on characteristics to their offspring meaning the animal species will gradually change and evolve (giraffe with the tallest neck could reach more leaves to feed on). Explain how the introduction of a new species to an isolated environment can affect native species (e.g. Dodo, Kakapo or Stephen's Island Wren)
	Find out about the work of palaeontologists such as Mary Anning and about how Charles Darwin and Alfred Wallace developed their ideas on evolution.	Compare the ideas of Darwin and Lamarck about evolution
Working Scientifically absorve and raise greations	Note: At this stage, pupils are not expected to understand how genes and chromosomes work.	puiranment, comparing how come living

Working Scientifically: observe and raise questions about local animals and how they are adapted to their environment; comparing how some living things are adapted to survive in extreme conditions, for example, cactuses, penguins and camels. They might analyse the advantages and disadvantages of specific adaptations, such as being on two feet rather than four, having a long or a short beak, having gills or lungs, tendrils on climbing plants, brightly coloured and scented flowers.

Science Curriculum

Year 6 Key Theme : Electricity	Key Vocabulary: Electricity, electrical current, alternating current, direct current, battery, cell, bulb, wire, open switch, closed switch, motor, buzzer, circuit, voltage, brightness, loudness, Thomas Edison, Nikola Tesla, Alessandro Volta,	
Previous Learning	Core Learning Intentions	Extension Opportunities
